

# Young science brains tested

By **LIAM BUTTERWORTH**

BUDDING physicists and chemists got National Science Week off to a good start at the 15th annual Gladstone Schools and Industry Science Group's challenge.

Held at CQ University Gladstone campus, the challenge welcomed Year 11 science students from across the region for three days of lectures and working in teams on an experiment.

Not just in the lecture theatre, students worked with mentors from local industry. The weekend culminated with the presentation of their work.

**ON THE BALL:** Toolooa State High school students Chantel Selmanovic and Gregory Hartogh take part in the Gladstone industrial science clinic.
